EDUCATION

Western Governors University,   Expected Grad. Date: 2022
Bachelor's of Science in Software Development

SOFTWARE PROJECTS

Intoro Kokyu
A music streaming service that I created that allows you to create your own account, browse music, and make your own playlists!
- MySQL/PHP for client registration and authentication, account management, playlists and media upload
- Ajax utilized to allow the ability to hear audio through the use of the music player/bar
- JavaScript/JQuery used for music bar and navigation

FreyBot, Node.JS, DiscordAPI, MongoDB
A bot that I wrote using Node.JS while utilizing DiscordAPI. This bot would allow anyone within the server to have the ability to have their inputs automated and made it easier for most actions to be executed (music playing, kick/ban, etc)
- Uses Node.JS for the use of commands and automation of inputs
- Utilizes MongoDB to allow users to 'trade' with a mock currency and exchange system

JS Blockchain, Javascript
I wrote a blockchain using Javascript for this project to learn how blockchain and cryptocurrency works on a fundamental level.
- Learned security basics of blockchain by using functions that validate integrity of blocks and their hashcodes
- Has the ability to create new blocks with hash validation as well

NES Emulator WIP, C++
An NES Emulator I wrote from scratch in C++. This would allow me to play NES games without the need for the actual physical console in my possession.
- 6502 CPU Emulation written to allow emulator to function
- Mappers and ROM support added to allow games to be ripped from cartridge and become playable without the use of an external console
- PPU used to allow rendering of foreground and background

EMPLOYMENT

H&M, Retail Advisor   Jun 2021 – present

Starbucks, Barista   Oct 2020 – Jun 2021

Florida Department of Corrections, Correctional Officer   May 2019 – Jun 2020
